

## **Second Meeting Notes for C3**

**11/6/2019**

### **Some information given by Andreas:**

Answer the top 200 most asked questions on campus using skills. Use the Amazon API for integration with canvas. Tie everything with the connection cards to add more money to a student's balance.

### **Potential Issues:**

Security, privacy, financial.

Ex. Having someone yell into another student's dorm to place an order on that student's account.

Ex. 2. Having someone add money to someone else's connection card.

A security audit may need to be done during the implementation of the software.

### **Important note for the future:**

Each week, an email will go out to the client to inform them of what is the current state of the product. Ensure that any changes or improvements are done with the client's knowledge and permission. Always keep the client in the loop and happy with the implementation of their requested software.

### **Next meeting:**

Watch over the "Build First Alexa Skill" video in the Google Drive.

Pay Chris for the key deposit if you have not done so already.

Bob will have to answer any questions that the students need to ask in order to write the SRS document that is due Wednesday 20th.

The students and Bob will also need to talk about the design of the software for the high-level and low-level design document due on Wednesday as well.
